

## How eHomeWiseIDX works

1. MLS data is published by your MLS Association. These files can be manually uploaded to your website or automatically using our web based FTP solution.
2. Once the files are uploaded the data is converted to a format that can be added to the database.
3. Once the files are converted to a format that is compatible with our system it will then be added to the database. Duplicate records are updated, records no longer in the new data are deleted and new records are added.
4. Once the data is added to the database users can then search and view all available listings. Depending on the size of the data from your association it takes anywhere from 2 minutes to 30 minutes to complete the update.
